

The flexible staffing solution that will revolutionise your event planning

AESOP is a fully-featured multi-user staffing operations system developed to ease the burden of managing casual, contract and agency staff at venues such as:

- stadiums
- racecourses
- conferences
- banqueting
- exhibitions
- motorsports

and all kinds of outdoor and indoor events, from the smallest to the largest.

### Multi-event

Each event is a functionally independent unit with its own working areas and staffing plan, so AESOP can easily handle multiple simultaneous events. The Staffing officer can draw on regular, casual or agency staff by region or from the entire staff pool. All employing costs, pay and expenses are uniquely identifiable and traceable back to the originating unit. Costing and forecasting tools ensure the budget always stays under control.

### Employee details

At the heart of AESOP is a detailed staff database, recording not only personal details and employment history but also training courses, disciplinary record and a continually-assessed performance rating. AESOP works across multiple jobs, events and venues to prevent double-bookings and warns if employees are unavailable for a given date.

### Event management

At the event level AESOP really comes into its own. It can handle multiple events at the same venue in the same week, with multiple staffing officers working simultaneously. Each event has its own characteristics, such as staff numbers, working areas, rates of pay, start and finish times etc. Once the event template has been created AESOP can auto-staff every area with regulars, by using job suitability and availability criteria, or the staffing officer can make selections the old-fashioned way. Staff can be selected according to their average rating, geographical location, age, training or almost any other criterion.

Having matched staff to roles, AESOP can offer jobs and record responses by SMS text message, or print combined gate-pass/job offer cards. Each card has >>
